

Patent-pending KSi Seed Filtration System filters out dust, particles, and other foreign matter.

The KSi Seed Filtration System pulls dust and debris from seed for better treatment application and adhesion.

KSi Seed Filtration Systems filter out dust, particles, and other foreign matter. Integrated into a system at strategic points in the process can better prepare seed for treatment adhesion/coating, while reducing residue on downstream equipment.

The closed, in-line system features

- Closed system
- Dual air filters
- Collection bin
- Variable air flow — damper and relief valve
- Filter “blast” clean-out

Note

- Patent-pending system is undergoing advanced testing and lab analysis in some of the world’s most advanced research and testing facilities.
- Not designed to improve atmospheric conditions — see KSi Dust Extraction

Availability

Limited release for Spring 2018

KSi Seed Filtration System
